

## Microprocessor - Independent Program Library

## PLMX. THE *UNIQUE* CROSS-COMPILER FOR MICROPROCESSOR INDEPENDENCE

With **PLMX** you are no longer restricted to any one microprocessor. **PLMX** is a flexible cross-compiler that generates code for the **8080/8085, Z-80, 1802, 6800/6802/6809, and 9900** microprocessors and executes under **TEKDOS\*, DOS/50\*, CP/M\*\*, and CP/M derivative** operating systems. This flexibility enables you to convert your existing PL/M libraries into a Microprocessor - Independent Program Library.

**PLMX implements** the structured syntax of PL/M and produces assembly language source files which can be assembled for **ROM-based** applications.

And **PLMX** offers the features you are looking for in a software development tool: portability, better program organization, more effective management of large programming jobs and savings in programming time and money. **So protect your software investment by contacting Roger Carlson - TODAY. He'll tell you all about PLMX.**
