

THE S-EIGHTY™

SEPTEMBER 1980 • FIFTY CENTS

BACK TO SCHOOL WITH THE MICROCOMPUTER

Get your **UPPER**
and lowercase the
easy way!

Why Lowercase?

You can't appreciate just how NECESSARY dualcase is on your TRS-80 until you've seen it. Once you use dualcase you'll never want to go back to UPPERCASE only again. In fact you'll wonder how you managed without it for so long.

The character generator in your TRS-80 ALREADY contains the following: Greek characters, numbers, special symbols, PLUS both UPPER and lowercase letter sets. Block Graphics are unaffected.

NOW IT'S SWITCHABLE!!

Due to pressure from our customers, we now offer "THE SWITCHABLE PATCH". It does everything the original PATCH does, PLUS switches in and out! This eliminates conflict with old software.

Yours for only
\$94.97

THE PATCH!

Unfortunately, converting your TRS-80* requires installing the video memory chip plus wiring changes. There is only one modification on the market which eliminates most of the wiring. To get the dualcase mod installed you have three choices: 1) Send your computer to a company or individual who will do the wiring, 2) do it yourself, or 3) "THE PATCH".

To make choices 1 and 2 operate requires using software overhead in the form of a "driver". This takes 30 bytes, unless you want a "normal" shift to UPPERCASE keyboard. That takes upwards of 60 more bytes. Software oriented mods have three more disadvantages: 1) They reside in program memory, eating program space which you could be using, 2) other machine language programs are unusable if they are loaded against the top of memory, or 3) the "driver" software MUST be loaded every time you power-up, or the "MEMORY SIZE?" appears due to program bomb. Choice number three suffers from NONE of the software overhead problems. We call it "THE PATCH" and it's new for the 80's!

"THE PATCH", a small electronic module which plugs into the unused ROM socket on Level II machines, makes necessary software changes to ROM supporting lowercase, an optional block cursor, and extra keyboard debounce. Electronically means NO software overhead. Your computer displays lowercase instantly upon power-up, and the keyboard operates in "normal" typewriter fashion.

"THE PATCH" is completely compatible with your TRS-80* since it is the first, and only, TRS-80* lowercase system designed that flawlessly mates with the computer as a unit, not just a special program package.

"THE PATCH" is also the only modification of any kind which can have extra options and updates factory installed for 5 to 10 dollars per option, as they are available. Same day turnaround.

THE PATCH is a trademark of CECDAT, Inc.

*TRS-80 is a trademark of Tandy, Radio Shack Corp.

SERIOUS READING

SCELBI's Secret Guide to Computers

This book will turn you into a computer expert, quickly and easily. It explains the kind of computer found in most schools, small businesses and homes — the kind that has interactive BASIC. You'll learn BASIC, having fun every step of the way. The book explains how to deal with computer machinery, which buttons to press and trains you to write many kinds of programs. The author's "underground" style of writing is sure to hold your interest. The only way to learn BASIC programming is to look at sample programs, analyze them, and then invent your own. This book contains 150 sample programs that do just that. Charts are given comparing the different computers. Follow the four "secret" lessons of this book and you'll be programming a computer with confidence!

Just \$5.95 No. 93

Calculating with BASIC

Here's a variety of programs in BASIC language to help the businessman, scientist and engineer. Shows how to apply the language to practical problems and equations. Formulas cover calculations of interest, payback periods, mortgage schedules, techniques for extending number of useful digits in monetary calculations using limited BASICs. A variety of electronic-applied formulas are programmed. The mechanics chapter covers resultant-force calculations, attractive forces due to gravity, projectile motion prediction and graphing, moments of inertia for T-section, I-section and channel sections. Mathematics chapter includes programs to solve the quadratic formula, general summation formulas such as sum of geometric progression, number conversion program, algorithms to compute sine, cosine, tangent, log e. For fun, games of Hangman and Space Capture are provided.

Only \$8.95 No. 30

Z80 Instruction Handbook

Your complete guide to the powerful Z80 instruction set. Machine codes are presented in both octal and hexadecimal format. A convenient index lists all instructions alphabetically along with machine codes and timing information. Industry standard mnemonics used throughout. Convenient pocket-sized edition.

Only \$5.95 No. 20

Personal Information Management System

Increase your information management capabilities — use PIMS! In business you've got a personal stake in how information is managed because information is your key to success. PIMS will allow you to unleash the power of a microcomputer, to make it work for you! Use your computer for accounts receivable . . . accounts payable . . . maintenance of inventory records . . . to keep track of credit charges. Or, apply PIMS to personal chores and let it help you to improve your ability to plan . . . save money . . . locate important facts quickly. Specifics such as management of income tax deductions, department store charges, keeping track of personal disbursements, and more, can be managed through your computer. Let PIMS introduce you to a new way of living . . . enjoy a better life style, more happiness and freedom from drudgery of routine chores through the better command of information that PIMS can bring your way. Designed for computers such as the TRS-80, PET, etc., PIMS will give you the power to succeed in either the professional or personal arena, even without prior knowledge of programming. Easy-to-read manual and source listing included. Success is only as far away as your copy of PIMS!

Only \$11.95 No. 10

Introduction to Low Resolution GRAPHICS

What is "low resolution graphics"? It's graphics presented on a point-by-point basis where the number of points is limited to about 8000 or less. The APPLE II, TRS-80 and PET all have this capability and this publication will enable you to utilize your computer to the fullest. Consolidate data through graphics. Plot plain and simple, or fancy and complex, graphs for business. A computer presentation can improve impact by clarifying and amplifying the substance of the materials at hand. But if your interests lean more toward just having fun, this book will quickly show you the way. Learn to produce amazing computer graphics — even if you can't draw a line, literally! Master the basics of line & shapes, then on to drawing pictures, even creating animations! Produce a deck of playing cards . . . a clown that winks . . . or if you feel really inventive, try your hand at meshing your favorite illustration with synchronized, computer-generated sound. A new opportunity in programming awaits you — invest in *Introduction to Low Resolution Graphics*.

Software Cookbooks — 6502, 6800, 8080, Z80

With the right SCELBI Gourmet Guide & Cookbook, you'll be able to put together programs without having to start from scratch. You'll have the most useful routines at your command — already programmed and ready-to-use. Features are search and sort routines, numerous examples of general-purpose utility routines, I/O and interrupt programming, control and manipulation of stacks, code and numeric conversion routines, flowcharts and source listings. Special listings include a presentation of machine codes (hexadecimal and octal notation included), and a reference guide to complete instruction set. All recipes are time tested. Tens of thousands of SCELBI's cookbooks have been used throughout the U.S. and in countries around the world.

No. 99 (6502) \$12.95; No. 50 (6800) \$12.95
No. 60 (8080) \$12.95; No. 75 (Z80) \$15.95

Understanding Microcomputers

If a basic understanding of microcomputer language has now become a necessity, help is here. *Understanding Microcomputers* offers its readers an education in microcomputer system information. The easy-to-read format assures quick comprehension for both the neophyte as well as the professional searching for business applications. This 300-page publication tells how to select a small computer system, introduces BASIC language programming, and illustrates BASIC instructions for almost every class of microprocessor. The convenient glossary covers all key terms.

Only \$9.95 No. 90

Learn Micro-Computers

A new multimedia information package for the beginner. Includes text from *Understanding Microcomputers* plus high-quality cassette. Covers all the basics quickly, easily and enjoyably. Companion tape includes chapter-by-chapter synopsis of the book. A great new idea for self-study.

Just \$14.95 No. 40

Take My Computer . . . Please!

An uproariously funny full length book about the true-to-life misadventures of well-known author Steve Garcia and his computer's inability to cooperate. Page after page of jollies and illustrations, too! Hardcover edition.

FEEDBACK

Dear Sir:

I must admit that I was very surprised when I read the Letter to the Editor in the May 1980 issue of your publication. As a computer programmer, and as a person who believes very strongly in good business ethics, I feel I must respond to the letter that Mr. Hern wrote.

Apparently, Mr. Hern, you are not a computer programmer. If you were, you would understand the amount of time, energy, and just plain hard work that goes into software development. When I talk about software, I am speaking of more than just the "games we enjoy", although they are of equal importance. I am talking about very large business applications, complex utilities, compilers, interpreters, languages, and operating systems. Some of these programs can literally take years to design and write. Consider this example:

For the past two and one-half years I have been writing a disk operating system (DOS). Writing a program of this nature is a very taxing process, requiring hours of research and experimentation. Just when you think you have a routine perfected the computer bombs out during a critical moment because of a tiny bug, which you spend hours tracing. After two and one-half years of work, the task is only about one-third complete. I am still not satisfied with the completed work. After all the other work is finished, I can devote only about ten hours a week to the project.

Let's take a look at the economic facts of life. The DOS will take four years to complete. This means that I will not have a marketable product until the end of 1981. At ten hours a week, 200 weeks, and \$8.00 an hour, the total labor bill alone is \$16,000.00. Add to that the figure research fees (not everybody can write a DOS), attorneys costs (I license all my programs), advertising and marketing costs, and the cost of

supplies and the bill is now hovering at \$20,000.00. Since the DOS must be able to run on the large computers (two and three drives instead of one; don't forget the printer.) there are certain hardware costs to consider. Add \$2,000.00. The total production cost for the DOS stands at approximately \$22,000.00. Of course not all of this is spent money; I could "donate" the labor.

Now we have to sell the final results of my four year project. If the DOS is a success, if the buyers recommend the product to other computer owners who then buy their own copy, if someone doesn't market something similar before I release my own, only then do I make my first dollar. Let's just suppose for a minute that my DOS is a smashing success and I receive orders for 10,000 copies. To make up for the money spent, I have to charge \$2.20. The diskette itself is going to run you \$8.00 (given inflation for another year). Shipping, handling, etc. is going to cost \$2.50. I have to make a profit and the DOS hasn't made any money for four years so add \$3.80 (just a tad over 30% of the accumulated costs thus far). Don't forget more legal fees for license processing (\$2.50), and having the documentation printed isn't cheap (\$3.00). The total unit cost to purchase the new DOS is \$22.00 (plus sales tax if you live in Michigan). Remember, also, that you have to wait 30 days before it comes via UPS or Parcel Post.

If I were a dishonest person who wanted a copy of that DOS, and knew someone who had a copy, I could obtain it for the cost of the material (\$8.00). That is a savings of \$14.00. So much for your mass marketing/low cost theory.

The example I cited above took "only" four years to write. Lance Micklus said that Randy Cooke's DOS took SEVEN years

I'm concerned. I'm concerned for the thousands of ordinary folks out there who are being duped into believing that they can make millions of dollars in the "fastest growing field in the nation" simply by writing software for micros. Don't get me wrong; there certainly is money to be made . . . but millions? Come on, let's be serious for a minute. Do you personally know any programmer who has made 'millions'? Frankly, I doubt it. To tell you the truth, I can't think of one. Thousands perhaps . . . but millions? No way.

How many young singers drift away with dreams of riches and bright lights only to come crashing back to earth, shattered? Just take a minute and list some of your favorite pop music stars. How many could you name . . . fifteen, twenty perhaps, thirty at most. Well, whatever the number may be, I'll bet that less than 30% of those rock'n rollers ever made a million bucks, not to mention the tens of thousands who never made a dime. "What does all that have to do with me", you say? Well, I'll tell you.

The parallels between microcomputing and the recording industry are uncanny, and in time we will have a few "super stars" of our own. Be patient; it won't happen overnight, and it won't happen without practice. Some day we may have our own 'Top Forty', and with that day will come the appropriate national recognition that our 'Super Star' artists deserve. But some people would have you believe that you'd be driving by the Los Angeles Coliseum, only to see swarms of packed micro-groupies anxiously awaiting the arrival of their 'Micro Star'. A scene out of a science fiction comic perhaps, but until we have the fans that the recording stars of today enjoy, the odds of our ever finding individual millionaire programmers are mighty, mighty slim.

As Project Manager at Kilobaud/Instant Software, I occasionally read an editorial or two. The one that I remember the most was June '79 **Kilobaud**, part of which appears below.

Getting Rich

Would you truly like to be rich? Would you like to own your own plane, perhaps a yacht and maybe an Arabian horse? How about being able to travel anywhere in the world you want . . . perhaps a 30-room home on 50 acres with a fantastic view, your own fish pond and even an outside sauna? Fantasy? Not one bit of it. There are fortunes to be made in microcomputing if you go about it the right way. No matter what your education or intelligence, you can become a millionaire . . . if you really want to.

Anyone who really wants to can become a millionaire within five to seven years - and in the microcomputing field I'd shorten that to a maximum of five years, just starting from scratch.

It's been a year or so since I left Kilobaud, and you know I've yet to find all those millionaire programmers. Can you help me?

NEW PRODUCTS

PERCOM DOUBLE-DENSITY ADAPTER FOR TRS-80* COMPUTER CAN BOOST 5" DISK STORAGE TO 354 KBYTES

Garland, Texas - June 5, 1980 - Harold Mauch, president of Percom Data Company, announced here today that the company had begun production of a double-density disk controller adapter for TRS-80*

Model I computers.

Using the DOUBLER™ as it is called, a TRS-80* computer owner can store almost four times more data on a five-inch disk - up to 354 formatted Kbytes - than can be stored without the DOUBLER™.

By comparison, standard eight-inch floppy disks store 256 Kbytes.

The DOUBLER™ adapter plugs into the controller chip socket of the computer Expansion Interface. No circuit modifications are required.

Price for the DOUBLER™, DBLDOS™ a TRSDOS* compatible double-density operating system - and a utility for converting TRSDOS*, Percom OS-80™ and other single-density files and programs into double-density format, is \$219.95.

SCHOOL MICROWARE

Dresden Associates is pleased to announce a new publication, **School MicroWare**, to serve the rapidly growing community of pre-college instructional computer users. **School MicroWare** will be a comprehensive and easy to use directory of instructional microcomputer software offered for sale by commercial and other sources.

The first edition of **School MicroWare** is scheduled for late September, 1980. Quarterly updates will be published in December, February, and April. A regular subscription will be \$20 per volume, including the current directory and three updates. A special introductory offer provides subscriptions at a reduced rate of \$15 until November 15, 1980. Quantity

discounts are available.

The first edition of **School MicroWare** will feature over 500 instructional programs and packages. Most school departments will be represented. It will include software for the three micro's most widely used in education, the Radio Shack TRS-80, the Commodore PET, and the Apple II.

School MicroWare is designed to be of maximum utility to the educator in search of software for use in the classroom. The main section of the directory will include four-line items for all products. This section will be organized by major discipline and within that by subject area. Each item will include program name, subject, grade level range, program type (simulation, etc.), and functional description. It will also identify the hardware on which the software operates, the programming language, the supplier, and the retail price. Other sections will list vendor information and all products by hardware system.

It should be emphasized that **School MicroWare** is being published for educators by

educators. Dresden Associates is a consulting firm specializing in instructional computing applications and information systems. Staff members have over a decade of experience in the instructional computing field. They understand school needs and are producing a publication designed to meet those needs.

Subscriptions to **School MicroWare** are available from Dresden Associates, P.O. Box 246, Dresden, ME 04342.

INTELLIGENT MONITOR
 INTERPRO (PO Box 4211, Manchester, NH 03105) has just announced the release of an intelligent machine language monitor for the TRS-80. ULTRAMON combines all the features you would expect from a monitor with a disassembler and interpretive execution. The 'Brain' fetches, decodes, and projects the result of each operation before execution allowing the user to stay in complete control. Interpretive execution also allows for a hardcopy trace disassembly and for the setting of breakpoints in RAM or ROM. This ROM independent, relocatable monitor sells for

\$24.95 with a 13 page documenta-
 tion booklet.

ZOOM 3.6

ZOOM 3.6 is an electronic "black-box" that connects in between a Level-II TRS-80 (or Expansion-Interface) and a CTR-41 or CTR-80 cassette recorder. With the ready-to-run software supplied with it, tapes can be written and read in a special format at 3600 bits per second - over 7 times faster than Radio Shack's 500! At that speed, 2K of RAM loads in under 5 seconds, and 16K loads in just 36 seconds - instead of in almost four-and-a-half minutes.

No soldering and no modifications are needed. ZOOM 3.6 is wholly transparent to all the XRZ mods (and to any other signal processor connected to the cassette-port), and to the CLOAD, CSAVE, SYSTEM, and PUNCH functions. A built-in

relay and a toggle-switch on the front panel bypass the unreliable Radio Shack reed relay. All cables can be left plugged in permanently.

ZOOM 3.6 is the fastest CTR-4/CTR-80-based system available, and it is believed truly to represent the state-of-the-art. With ZMBUG V1.0 object code and the manual, it costs only \$119.00; far less than either an Expansion-Interface plus a floppy-disk (\$670 and up) or a high-speed cassette deck (\$250 and up). Delivery is currently estimated at three weeks.

For further information please send a SASE to ZOOM! PO Box 3766, Nashua, NH 03061. (Telephone 603-889-0901)

TURN YOUR IBM SELECTRIC

TYPEWRITER INTO A PRINTER

Kogyosha, the largest manufacturer of DC solenoids in Japan, announces the production of the KGS-80 Keyboard Actuator. This new peripheral turns an IBM Selectric Typewriter, or its equivalent, into an economical, high quality printer for the Radio Shack TRS-80 Microcomputer.

In seconds, the KGS-80 is positioned on the keyboard, plugged into the expansion interface, or directly into the CPU using the interface cable, and the Selectric is ready to start printing all Level II print commands.

No modification to the typewriter is necessary, so your IBM warranty/service contract is unaffected.

The KGS-80 does not require any software to operate. All memory space is available, making it fully compatible with the Electric Pencil, Scripsit or other word processing programs.

Four non-abrasive screws - only adjusted once - assure proper fitting of the KGS-80 with the keyboard. There is no additional wear on your typewriter. Soft plastic-tipped solenoids inside

the KGS-80 press the keys in the same manner as a typist would.

The speed of the KGS-80 can be controlled from 10 to 20 characters per second, excluding the shift-lock release and carriage return (manually adjustable). The unit supports both upper and lower case letters, numbers and common symbols. By using the IBM ASCII typing element, all Level II symbols can be printed.

The cost of the KGS is \$599.00, without the power supply.

Models will soon be available for the Apple, Pet, Ohio Scientific and other microcomputers, with either parallel or serial port.

The solenoids used in the KGS-80 have been factory-tested in excess of one million cycles, assuring years of trouble-free performance. Kogyosha Company has twenty-six years of experience building DC solenoids. They are a supplier to IBM, GE, Dictaphone and Sony.

For more information, contact Mark Nakanishi, Kogyosha USA Office, 179 Riveredge Rd., Tenafly, New Jersey 07670. Telephone: (201) 569-8769.

**TRS-80 LEVEL II BASIC
A SELF-TEACHING GUIDE**

Now available from Radio Shack is TRS-80 Level II BASIC, a self-teaching guide for learning to program and use a Level II TRS-80 Microcomputer System with no previous computer experience.

According to Radio Shack, no matter what your level of experience with computers, from

beginners to more advanced hobbyist or professional, this 351-page step-by-step manual includes all the information needed to make a computer work for you.

Written by Bob Albrecht, Don Inman and Ramon Zamora, each chapter of the self-teaching guide is composed of short, numbered sections called frames. Each frame presents a single idea or topic on the BASIC language, the TRS-80, or a program that is being developed.

The authors believe that learning to program can be an enjoyable experience. They feel that computer terminology and concepts can be introduced within a framework of fun and exploration. Small games and recreations are sprinkled throughout the book. Application programs and the elements of developing simulation routines are also presented.

The TRS-80 computer, according to the authors, is a tool that you can use to aid you in whatever you are doing. This book is designed to help you fully explore that tool and learn some general information about

programming that applies to many other computers.

The material in the book gets more challenging as you move through the chapters. Beginners are advised to start with the first chapters and progress through in order.

Radio Shack TRS-80 Level II BASIC, a self-teaching guide, is available from participating Radio Shack stores and dealers, and Radio Shack Computer Centers. Priced at \$9.95.

The S-EIGHTY is happy to publish information about new products related to the TRS-80*. We cannot be responsible for the accuracy of the information presented here, and those with questions are asked to contact the indicated companies directly.

action PROGRAMS

Are you fed up with namby-pamby computer simulations that offer no challenge? Are you disgusted with utilities that have only limited applications? THE PROGRAMMERS' GUILD has the answer for you NOW.

DEATH DREADNAUGHT

This mind chilling thriller will freeze the blood in your veins. You are trapped aboard an ancient battlecruiser whose entire crew was murdered brutally. You are the scout team's only survivor. Your ships been smashed, but one alien shuttlecraft remains intact. As you move about the wreck the danger increases. You must secure air, food, fuel, and batteries. Now, as precious seconds of your life tick away you suddenly realize YOU ARE NOT ALONE! The creature that ripped this ship apart is ALIVE and waiting for you to make a mistake. CAN YOU ESCAPE? Or will YOU be the creatures next victim?

\$14.95 on tape \$19.95 on disk

WARNING: DEATH DREADNAUGHT IS RATED R due to EXTREME descriptions of VIOLENCE.

SPIDER MOUNTAIN ADVENTURE

Beyond the desolate outback of GRAYLOCK-LAND lies the lair of the spider SHELOB. Once a wizard's cavernous fortress, SPIDER MOUNTAIN is now a deadly trap from which only the most skilled adventurers emerge. Treasure awaits the fortunate. DEATH stalks the foolish.

Can YOU solve the riddle of the SPIDER MOUNTAIN ADVENTURE, and come back alive?

Apparat, Inc.
introduces

NEWDOS/80

For the 80's —
an enhanced NEWDOS
for your TRS-80™
Model 1.

Apparat, Inc., announces the most powerful Disk Operating System for the TRS-80®. It has been designed for the sophisticated user and professional programmer who demands the ultimate in disk operating systems.

NEWDOS/80 is not meant to replace the present version of NEWDOS 2.1 which satisfies most users, but is a carefully planned upward enhancement, which significantly extends NEWDOS 2.1's capabilities. This new member to the Apparat NEWDOS' family is upward compatible with present NEWDOS 2.1 and is supplied on Diskette, complete with enhanced NEWDOS + utility programs and documentation. Some of the NEWDOS/80 features are:

- New BASIC commands that supports files with variable record lengths up to 4095 Bytes long.
- Mix or match disk drives. Supports any track count from 18 to 80. Use

35, 40 or 77 track 5" mini disks drives or 8" disk drives, or any combination.

- A security boot-up for BASIC or machine code application programs. User never sees "DOS READY" or ">READY" and is unable to "BREAK", clear screen, or issue any direct BASIC statement including "LIST".
- New editing commands that allow program lines to be deleted from one location and moved to another or to allow the duplication of a program line with the deletion of the original.
- Enhanced and improved RENUMBER that allows relocation of subroutines.
- Powerful chaining commands.
- Print Spooler.
- DFG function; simultaneous striking of the D, F and G keys will allow the user to enter a mini-DOS to perform some DOS commands without disturbing the resident program. (e.g. dir while in scripsit.)

- Upward compatible with NEWDOS 2.1 and TRSDOS 2.3.
- Includes machine language Superzap/80 and all Apparat 2.1 utilities.
- Enter debug any time by pressing 123 keys. Also allows disk I/O.
- Diskette "Purge" command.
- Specifiable system options (limited sysgen type commands).
- Increased directory capacity.
- Copy by file commands.

NEWDOS/80 with all of the NEWDOS + utility programs, many of which have been enhanced, is priced at just \$149.00 and is available at most TRS-80 dealers.

As with 2.1, NEWDOS/80 relies on the TRSDOS and Disk Basic Reference Manual published by Radio Shack. NEWDOS/80 documentation supports its enhancements and upgrades only.

READER SERVICE 4 S 0/1A

RADIO SHACK'S "VERSA-FILE"

As a person with a great many diversified interests, I am always jotting down notes or reminders regarding a multitude of subjects. When the volume of these notes gets to be a little unwieldy, I review them -- and frequently end up with sub-notes!

When I first saw the announcement by Radio Shack about a disk program called "VERSA-FILE", it looked like a way to finally get organized -- but still keep my note "system". Indeed, it has permitted me to do that, and more. Almost daily I find a new use for this unique program.

"VERSA-FILE", in effect, permits you to keep note records of any information chosen, with instant recall of this information by an input query. For instance, you might place this statement on file: "Passport is in security box top shelf of bedroom closet." (No quotation marks are used in actual input -- just the sentence with a period.) Weeks, or months later, you might wonder where you put your passport for safekeeping. You do remember that you had listed it in "VERSA-FILE". So you query the file with "Where is my passport?", and promptly the answer comes back: Passport is in....etc. The possibilities of keeping track of seldom-used or easily-forgotten items or documents, "etc". is endless. There would appear to be some reason to consider the program for inventory purposes, too. However, I feel that the entry mode (individual statements to disk) would be unwieldy, and, as there is no sort capability, there are more efficient programs that are available for inventories.

As an active amateur radio station operator, I frequently wish to know the date when I contacted a certain station. Although I keep a log, it is necessary to scan the "call" column for months back in order to determine this. Now, with "VERSA-FILE", I enter all calls for a particular day with the statement: "Contacts for 06/03/80 were: W6BRG, KA6YFA, YU4HO....etc." Then, when I need a contact date, I query, "When was contact with W6BRG?", for example. The reply provides my original input statement, which, of course, includes the other station calls, too. I may also ask, "What contacts were made on 06/03/80?", and get the same information.

Another application with some good possibilities is language translation training, similar to that now done on the handheld translators, or just for study purposes. For example, enter "In German, Good Day (or "hello") is Guten Tag." Then, you can query, "What is Good Day in German?" -- and, sure enough, there is the answer! History, politics, dates, mathematics can all be similarly handled.

What is happening here, and how does Radio Shack's program author accomplish this? Well, without going into the deep details of the program

itself for its technicalities, the basis is Keywords, and each Keyword is a data file. The Keywords on this disk program are: "is", "are", "was", "were", "will", "has", "can", and "the". However, the program is in BASIC and may be listed and edited, if you wish. Therefore, you may change any Keyword to suit your needs. As an information entry is made, the data is stored within the Keyword file. That means, of course, that if you enter a statement that contains no Keywords (and that's hard to do!), then the statement will be placed in the last file ("the") along with any "the" entries.

At the time a query is given to the computer, a search is made within the related file for a statement containing companion words to the query. As some statements on file could be closely related, more than one statement could be returned. For instance, if, in our passport example given, we had entered an additional statement, which said that Bob's passport was in the desk drawer, and then asked "Where is the passport?", both passport statements would appear. But by making the query more specific, the search is restricted and will provide the single answer desired.

If you are not sure in which file one of your entries resides, you can perform a "Global Search". In this case, if you provide the word that you are searching for (again, for example, "passport"), then the response will be all statements containing the word "passport". This will occur even though the original statements may be in different Keyword files. Similarly, an entire file may be produced by merely typing the Keyword and a question mark (e.g. "is?"). At any time, if you do something unacceptable to the program, the response will be, "I don't understand your entry. Please try again."

Any or all files may be "killed" at any time, either individually, or as a "multiple kill". A warning is issued in the latter mode, which states that all records in that file are about to be killed. Upon completion of any kill action, a statement is displayed, advising the number of records killed. On a multiple kill, you have a last chance when you are asked, "Are the records kills correct?" Also, in a multiple kill, the records must all be in the same file; otherwise the display will interrupt your input and state, "Not in same file!" In this case, a new kill must be initiated for the "foreign" Keyword file.

The manual for the program is contained in a "TRS-80 Model I" brown plastic three-ring binder of good quality. One clear, plastic, two-diskette sleeve is provided for the supplied diskette, and, presumably, a backup diskette. The manual itself is extremely clear and would permit anyone who

continued on next page

continued from previous page

has no knowledge of programming whatsoever, and only a rudimentary knowledge of TRS-80 operation, to run this program without any difficulty. Many examples of each function are given (something that is needed in many program guides). For those demanding a more thorough background, a call for "List" will give them the whole program, which, incidentally, is fairly complex.

The excellent printing and layout of the manual is somewhat marred by several spelling errors and some typographical mistakes, but these are minimal. An Appendix provides information on formatting disks and on making backup copies, but fails to address the poor single drive owner.

Printing is supported on any question or answer. Minimum system requirements are 16K Level II computer, Expansion Interface, and one Disk Drive.

As a very useful information filing program, "VERSA-FILE" meets all the requirements, and more; its possible varieties of use could be considerable. The price of \$29.95 is certainly reasonable, if you can utilize its full capabilities. But unless you can, then the cost to you will be high for something that is just "played" with and then put aside. Hopefully, this rather detailed review will help you to make the correct determination.

VERSA-FILE. Catalog No. 26-1604, by Radio Shack, a Division of Tandy Corporation. 

CASSETTE BASED MACHINE LANGUAGE PROGRAMMERS, REJOICE!

Are you tired of reloading Radio Shack's Editor/Assembler and the source and object tapes every time you want to try out a program that you are debugging? If so,

YOU CANNOT AFFORD TO BE WITHOUT

"ASPTCH 2.0"

by James F. Williams

ASPTCH loads after EDTASM and adds these functions:

1. Reserve area at top of memory
2. Display number of bytes left in text buffer
3. Dump assembled program DIRECTLY into that area without using a cassette
4. Execute the dumped program
5. Convert and display memory locations and their contents.
6. Enter Level II BASIC's Monitor mode (system prompt)
7. Enter Level II BASIC's command mode and use all functions that do not use variables
8. Return to fully programmable BASIC, keeping dumped programs intact, if desired (for use with BASIC's USR command, for example).

Included with ASPTCH 2.0 are two utility programs: SYSTPE which permits you to copy any number of distinct memory areas into one System format tape and BREAK, which allows you to halt execution of a program being debugged and display flag and register conditions.

ASPTCH requires TRS-80 Level II, 16K and up and is used with Radio Shack's Editor/Assembler 1.2

All three programs only \$19.95 with complete instruction manual and cassette (Instruction manual only, available for \$1.25)

ORGAN: Play your TRS-80 like an electronic organ. Video display shows a two manual keyboard with corresponding TRS-80 characters overlaid. You can play single notes or chords, change sound quality, select from two loudness settings. Output sound to cassette or directly to a small amplifier through the auxiliary jack. Instructions and program cassette only. \$14.95

MICROPUTE SOFTWARE

"WE DO ALOT WITH A LITTLE COMPUTER"

HOUSEHOLD FINANCE PACKAGE: Plan and monitor your spending with this budget program. You can balance your checkbook, record and print savings information, group budget items for sub-totals, monitor credit accounts, investments, and tax deductions. For Level II, 16K cassette and up or 32K disk and up. SPECIFY DISK or CASSETTE version. Programs and instruction manual. \$29.95

DISK LIBRARY: A two program system that provides simple indexing of all your diskette programs. Individual disk libraries recorded on each diskette permits the access of any program by simple number entry as displayed on video output. The program also provides indexed hard copy printouts of disk program library. Editing feature allows for adding, deleting, or correcting library information. Two programs and instructions. \$9.95.

CHEMISTRY I: Laboratory workers, students and researchers can solve the fundamental laboratory problems that taunt you daily. Program solves solution mixing problems (Molarity, Normality, Molality), titration problems, ideal gas law, pH, temperature and metric conversions. Level II, 16K and up CASSETTE version \$29.95, disk version with file storage capability \$37.50. Programs come with complete instructions. (Chemistry II will be released in Oct.-Nov. 1980)

CONTRACT PROGRAMMING: Contract programming is available in business, science, and computer assisted instruction (CAI) areas. Please send inquires to the address below. Briefly describe needs and specifications for estimate on contract work.

TERMS: We accept check, money order, Master Charge or Visa Card. North Carolina residents include 4% sales tax. Please enclose \$1.00 shipping and handling charges on all orders.

Send your order to: Micropute Software, P.O. Box 1943, Rocky Mount, North Carolina 27801.

Milford, NH 03055

SAIL INTO THE WORLD OF MICROCOMPUTING

SoftSide is now a full size magazine! Each month we bring you the best programs, tutorials, reviews, and programming hints for your computer. We're understandable, and we've got information you can use. Follow along as we show you how to develop your own programs, or type in your favorite games, utilities, and home applications from our listings. All our programs are well documented so you can see how they work, not just what they do. If you can't find SoftSide at your local computer store, call us toll-free at 1-800-258-1790. (In NH call 673-5144) to order or subscribe.

Our regular subscription rate is \$18.00/year (12 issues), but until November 1st, try our introductory special at \$15/year.

SPEED ON THE TRS-80

Much has been written about the "speed" of data processing. Certain CPU chips are "fast," there are "fast" and "slow" RAM memory, and "speed of execution" is measured in nanoseconds and microseconds. What does it all mean, and is it relevant to the average TRS-80 owner? As usual, the stock answer is that it depends on the situation.

There are several situations in which speed is of great importance:

1. In process control and other real time situations.
2. In time sharing situations.
3. When you are using leased transmission lines.
4. When utilization approaches full capacity.

In the first situation, the computer is interfaced to a series of measuring instruments and controls so that it can measure certain parameters and take certain corrective actions based on the readings it obtains from the controls. The "speed" of the computer determines when the next measurement can be taken and is very important in industrial quality control, since the process has been unsupervised since the last measurement was taken many nanoseconds ago. If anyone is using the TRS-80 for control applications, he has the material for an excellent article of his own and does not need advice from me.

However, now that Micronet, The Source, Forum 80, and various Community Bulletin Board Services are in operation, the second and third situations will come up more often. Even though the BAUD rate is standardized at 300, it is still possible to create savings in the pocket by cutting down on what is transmitted and by trying to say the same thing with fewer bits.

Situation Four will probably always be the most common case. In its classical textbook form, this is where the programmer attempts to avoid something expensive, like a new shift of operators in the computer room or the purchase of a larger machine, by finding a way to get the required output through the computer in less time. The TRS-80 owner is not generally faced with a decision of this nature, but he probably would like to cut down on long pauses in the program where nothing visible is happening. He would like to get on to the interesting parts.

When is speed not critical?

1. When the program provides for a great deal of interaction between user and computer. The computer's delays, measured in nanoseconds, fade into insignificance as the machine waits for the user to scratch his head, refocus his bifocals, and shift his chair prior to entering his response.
2. When the computer is "peripheral bound." Regardless of how efficient the programming is or how fast the CPU is, if you have a slow printer, you just don't finish the job significantly faster.

Still, attempting to speed up one of your programs is a good intellectual exercise and not without its own set of benefits. Even if you only use your TRS-80 for games, cutting down on the length of time necessary to draw a backgammon or checker board on the screen can increase your enjoyment of your machine, so it's still a worthwhile endeavor. So how do you go about it?

First, learn more about TRS-80 BASIC. There are many alternate ways of coding the same program. Some run faster than others. Most good BASIC textbooks, including the famous Radio Shack User's Manual for Level I, may have hints for speeding up execution. Read several of them. They are rarely totally repetitious, and sometimes if a reader is told the same thing several times, it finally sinks in. After reading several textbooks, read some of the articles in the various hobby journals, including this one. Occasionally some hobbyist full of wisdom will seek to share his own discoveries on speeding up execution with other hobbyists. A trick that I have used with slow programs is to save the original program and then find a part of the program that has a fairly definite starting and stopping place. Time the execution of this part of the program with a stop watch or any timepiece with a second hand, and then begin to make your changes. Retime the program from time-to-time to see if various changes have helped or hindered execution speed. When you have arrived at what you consider to be your best effort, save it before you sign off the computer. You can use it as a starting point, next time.

Second, you might try a different higher level language. Now that FORTRAN, COBOL, FORTH, APL, PASCAL, BASEX, and tiny C are available on the TRS-80, maybe one of these languages will pick up the execution speed of the program. There are also other BASIC dialects, and some of them are compiled rather than interpreted versions, so that you would actually be running a lightning-fast machine language object program.

Next, with increased involvement on the user's part, but probably less expense, you might want to program in Assembly Language, using the Editor-Assembler, or Machine Level Language, using T-BUG, or you can use one of the other monitors. This is, of course, quite involved and should be undertaken only if you mean business.

First try putting machine language subroutines into BASIC programs. Then try whole programs in machine language. Again, the hobby magazines will provide some help.

Mentioned last, for good reason, is the possibility of speeding up execution time by doctoring the inside works of the TRS-80. In the first place, all of the advertising and other discussion of this type of modification indicates that it will

continued on next page

continued from previous page

speed up execution time by approximately fifty percent. Most of the advertised software, including new language compilers, promise speed increases of factors of from three to twenty times the speed of Level II BASIC. Obviously, then, the software route is the way to go before trying anything else. In the second place, these speed-up modifications will probably void the Radio Shack warranty. However, if you have done about all that you can do in the software direction, presumably you will still be able to improve your best effort to-date with a speed-up modification.

So if your wife has become restless watching

Feedback continued from page 4

to write. If programming is putting bread and butter on your table, seven years is a long time to wait for a project to begin making money.

Above and beyond all else, the law is quite specific with regards to theft. Our society places stiff sanctions on those who steal from others. There are patent and copyright laws to protect literature and inventions. If you want to "hang the ethics" because you feel "no one gives a rat's tail about morality", does that give me the right to go out and shoot someone who steals my programs?

Software that people purchase for their computer belongs to the original purchaser. Let them modify it, rewrite it, destroy it, whatever they like, so long as they don't copy it off for their friends and relations to use. Any fool can take other peoples' programs and append them; that hardly qualifies as writing software.

As for you, Mr. Hern, business people who "swallow their pride" when theft is occurring right underneath their noses are an even greater threat to our free enterprise system than those who do the stealing.

Respectfully yours,
Christopher C. Gillett
Software Design Laboratories
Harrison, MI 48625

My sentiments exactly, Chris. Great letter. I really wonder how many readers actually took Mr. Hern's letter seriously. Frankly, I discounted the entire piece as pure rubbish. On one hand he characterized the "... political left ..." as unappreciative non-producers and, later on, advocated "hang the ethics ...". It sounds to me like Mr. Hern's answer to the copyright infringement problem is quite similar to that which he

you play Star Trek, try spending your time speeding up one of your more practical programs. It is an excellent way to learn more about programming. 

accuses the "... dwellers in the dreamland of the political left ..." to be guilty of. By the way, what does the "political left" have to do with software piracy? W.F.G.

Dear S-Eighty folks:

I guess if you're just doing a compendium of TRS-80 advertising, you're doing an OK job. The little polemic by Bill York in the June issue entitled "Economics??" looked to me like an eleventh-hour afterthought cranked out at high speed - I can write better in my sleep - and who was it directed at? Certainly not the readers. Maybe we've got a democratic organization here of the advertisers, for the advertisers, and by the advertisers.

But if that's so, why have editorial content at all? As an author, I was (expletive) that you didn't publish the listing of my program ONECLAP last month. And I was also (expletive) that I didn't receive a single review copy. I loaned out my "subscription" copy and the recipient lost it, so now I don't even have a copy of my own article! But I wasn't (expletive) enough to write.

But I was genuinely interested in Scott Snyder's subroutines. His article (after the funny part) says "We must first look to line 110 ...". Like my ONECLAP, you printed the article (written to complement the listing), but not the listing, making the author feel dumb, the reader infuriated, and DOS offended.

Bill York: if you listen to that stuff on the radio going to work, your brain turns to MUSH. Roger Robitaille: if you need someone to put the editorial material together right, I'm available.

Michael Potts

P.S. Tell Scott Snyder I'll trade him a listing of ONECLAP for a listing of his subroutines.

Michael, which came first, the chicken or the egg? It sounds to me like your anger towards us for not running the "ONECLAP" listing has surfaced in the form of a blanket indictment of our publication, which I believe to be unfair. A publisher generates the bulk of his income directly from the pages of each month's issue. The June issue consisted of 53% advertising and 47% editorial. Perhaps to someone 'outside' the publishing business this ration seems excessive. We barely cover our costs with a 50/50 mix of editorial vs advertising. Aren't we entitled to a ham sandwich? I can't fault Bill York on his piece entitled "Economics", other than to say that the S-80 is not an industry newsletter and its' readers are more concerned with end user problems than with those that beset advertisers, perhaps we erred in running it. We'll watch it next time. Thanks for your offer to assist us editorially. We can all use some help from time to time. Well, I must sign off now; I have a terrible headache, probably from listening to all those Boston radio talk shows?  W.F.G.

OPPOSITE GRAPHIC RELATIONSHIPS

Few people have noticed that there is a direct relationship between a graphic character and its opposite on Radio Shack's Level II computer. By using a simple routine, a graphic character on the screen can be reversed; that is, the lit squares can be darkened and those that are dark can be lit. This can help create some very interesting and eye-catching video displays. That is the application which caused us to first realize that a pattern existed.

We had drawn a picture on the screen which we planned to use as a display in a window. We wanted a scan from the top to the bottom which would change the picture from a "positive" to a "negative". The discovery of a direct relationship between a graphic character and its reverse enabled us to have the animated display we had hoped for.

Here's the relationship. As you know, a graphic character is made up of 6 blocks. ASCII Code 128, no blocks lit, is the reverse of ASCII 191, all blocks lit. Code 129 is the reverse of 190, 128 is opposite 189, and so the pattern goes until it reaches 159 and its reverse, 160. Figures 1 and 2 demonstrate this pattern of the end characters matching opposites on the way toward the middle.

The routine for reversing is shown in Figure 3 from lines 50 to 200. It reverses scanning from the top of the tube to the bottom and then reverses again (Line 90) going from the bottom up as if it bounces off the side of the screen.

The beginning lines simply throw random "garbage" graphics on the screen.

The actual math and logic portion of the program can be described in a nutshell. A video memory address is peeked and a value is obtained. The computer takes that value and subtracts 128 from it. The result is

FIGURE 2

BACK TO SCHOOL

322 South 21st Street
Haines City, FL 33844

Dear Sir:

In the May 1980 issue of the S-Eighty an article by Michael Potts appeared. He seemed upset at the lack of good educational programming. And, in some ways, he's right. It is hard to find. However, if you look hard enough, it's there.

I discovered these two programs, "The Playful Professor" and "The Human Adventure" through an ad in 80 Micro Computing. I have been very impressed with them.

I asked a math teach his opinion of "The Playful Professor." He is very excited at his prospects of using it in his classes next fall.

I have no connection what-so-ever with Med Systems Software. I submit this article to let people know that these programs are available.

Thanks for your consideration of my article.

*Sincerely,
Sherry M. Taylor*

For those of you who are bemoaning the fact that there are few educational programs available, Med Systems Software of Chapel Hill, N.C., has brought out two new programs that are worth mentioning.

Most kids really hate drilling with math problems, but "The Playful Professor" makes it a little more fun. With this program two youngsters (or oldsters) can drill together. The program sets up a sixty-room mansion complete with a pesky ghost who has the key to the front door. The player must chase the ghost to get the key and make it back to the front door before the ghost or other player takes the key from them. The doors to the rooms open and close at random with each move.

To make moves through the mansion, the player must answer the math problem correctly. Then the number of moves is determined by the roll of dice. If the player is temporarily trapped in a room, his move is skipped and

play is passed to the other player. If there is only one player, the next problem is served up.

From the educational standpoint, the tutorial routine of the program makes it worth much more than other drill programs. If a problem is missed, the screen is cleared and the program goes into an explanation using a blackboard format familiar to every student. It takes the student step-by-step through to the solution. Even the tutorial is interactive in the case of reducing fractions to their lowest terms. After the explanation on how to reduce fractions, the program asks the student what number will reduce it.

"The Playful Professor" provides tutoring in integer mathematics as well as fractions, for the four basic operations. There are three difficulty levels: easy, hard, and hardest. And if you enter the password instead of a difficulty level, you may play the game without the problems.

I have only one gripe about the program. When working fractions on the hardest level, there is a 3½ to 5 minute delay before you are told if you are correct. This is apparently due to the time the program takes to work out the solution in fractions rather than in decimal notation. Also, there is a delay while it checks to see if the answer is in lowest terms. Of course, this time could be used by the student to check the problem out for him or her self before the computer gives it all away. But knowing most kids, they'll use the time to go get something to eat!

The program is in BASIC so that you may modify it to fit some of your own needs. However, if you have only 16K of memory, you won't have enough room to modify it much. The program uses all of 16K. This includes the BASIC code, the machine-language subroutine and work area.

The other new program from Med Systems is "The Human Adventure" which allows movement through the human body's cardiovascular system.

Adventurers will find this one a challenge. I haven't accomplished my mission yet. This too, will need all of 16K memory.

Many people will remember a movie called "The Fantastic Voyage." In this film a patient having vital information was incapacitated by a blood clot in the brain. To get to it, the medical team was placed inside a mini-submarine and then reduced to microscopic size. The sub was then placed into the bloodstream of the patient by a hypodermic syringe, enabling the medical team to travel through the patient to the site of the clot and destroy by laser fire.

However, there was one catch: antibodies identifying the submarine as a foreign material began to attach themselves to the sub, signaling the white blood cells to begin their attack.

This is the premises of "The Human Adventure." Therefore, only movement in the direction of blood flow is legal. Access to all major parts of the body is possible by making the correct decision. The CATscan-like graphic of the patient shows the subs location and the disease locations.

Since this program was designed more as an educational tool than as an Adventure, this program has three modes. The exploration mode involves no disease and no white blood cell attacks. It will allow you to become familiar with the body's layout. All locations are fully described, and you may choose either a female or male body. (May I recommend a dictionary beside your computer. Many medical terms are used. Don't be surprised if your children start talking like surgeons!)

The game mode involves a patient with cancer. Initially there are two affected sites, each growing at an average but not identical, rate. The rate is determined by the difficulty level chosen (easy, moderate, and difficult.) At a certain point in

continued on next page

continued from previous page

their growth they will begin to infect other sites, if they are not destroyed.

Your sub is equipped with a laser gun to kill the attacking blood cells, and you will have to periodically electrify the hull to burn off the build up of antibodies. Of course, all this traveling and laser fire will use energy, so you must make your way to the brain to replenish the energy of your batteries through filed induction.

When you have finally made your way to the affected site, you will have to shoot it with interferon charges. Those cost no energy, but you have only 20 per game.

For reports and other information, the command REPORT will give the locations of all affected sites, the commands available, and the number of interferon charges left. There is also an option for arterial/venous traces.

All commands are one word and may be abbreviated to three letters. You are shown the percentage of energy still left as you travel. If you allow the energy level to drop below critical, you will have no defense and the entire submarine and crew will be engulfed and destroyed by white blood cells!

The third mode is the attention or demonstration mode. In this mode the moves are made by the computer and no disease incurred. Also, after 6 to 7 moves, the venous/arterial traces are shown. Then the demonstration returns to moves.

The only gripe I have about "The Human Adventure" is that the graphics are not as detailed as I would like them. You may mistakenly think you are at the affected site by what the graphics show. You may be in the right phrenic artery and the disease really be in the right phrenic vein, although the graphics picture you right on the site. You have to check out the descriptions with the indicated sites given by REPORT. However, I suspect the graphics are as detailed as can be, given only 16K memory to work with.

I enjoy "The Human Adventure" very much even though I sometimes get very frustrated. I seem to end up going in circles, or

am caught by the current heading in the opposite direction from my intended course! But then, I'm not always going the right way in real life!

Both "The Playful Professor" and "The Human Adventure" are available from Med Systems Software, P.O. Box 2674, Chapel Hill, N.C., 27514. They guarantee all tapes to load and run, and any defective tapes will be replaced, if the bad ones are returned to them. They also guarantee to ship your order within 2 working days. If there is a back-order, you will be notified and the balance of your order sent ahead to avoid delay. The programs are very reasonably priced at \$9.95 each. Not a bad deal, wouldn't you say???

This Weekend: STIK IT.... ..to your

TRS-80

That's right! Esmark's VIDJET-STIK light pen has the TRS-80 CONNECTION for LEVEL I & II. Your 4K to 48K TRS-80 System will come alive under your VIDJET-STIK within minutes of its arrival. That's because there are no wires to solder or traces to cut. You're up and running as fast as you can plug the interface into your system's cassette EAR-jack. CLOAD our custom LIGHT-WAVE demonstration software and RUN. And because the interface has a plug for your recorder, you won't have to unplug it again when loading your other software tapes. The interface allows them to pass right thru whenever you're not using the pen. It's exclusive: "switched tip" design means the pen's electrically isolated from your system when it's not in use. Just point & press! It's that simple. Plug, CLOAD and RUN. And have we got the software for you to RUN with! Our demonstration tape includes a calibration program (used to adjust the CRT's brightness and contrast) plus STIK-TAC-TOE, AWARI and TOWERS. Two challenging games and a puzzle that will keep grown-ups and children Stik'ing it to your TRS-80 for hours. And there are instructions provided so you can begin writing your own light pen programs (lightware) for fun or profit (Level II). Or, just sit back and enjoy our LIGHT-WAVE tapes each month. Esmark's unmatched commitment to lightware can bring you up to five new games, puzzles, drills & educational quizzes or simulations each month. Our current LIGHT-WAVE releases are

- LIGHT PAK 2 LIGHTPEG (4 peg-jump puzzles)
(LEVEL II) ENDRUN (Othello with a 'twist')
LIFE9 (Conway's LIFE with mutations)
Price: \$19.95 (including postage & handling)
- LIGHT PAK 3 LITEGAMMON (Backgammon you'll Stik with)
(LEVEL II) STIKWUMPUS (Caves with a little 'life')
MAZEMASTER (Maze after maze to poke thru)
Price: \$19.95 (including postage & handling)

Order yours now and we'll include a free copy of FLASHBACK, Esmark's newsletter dedicated to the latest news in lightware applications. And don't forget to tell your friends. The VIDJET-STIK can also be ordered for use on most other micro systems using the following processor chips:

8080 Z80 6800 6502

All that's required is a standard cassette jack leading to Ground and a readable single bit input port. Driver software is provided along with instructions for writing lightware applications. And tell your local Dealer that Esmark's got a Dealer package he won't want to miss out on. Delivery is 3 to 6 weeks from receipt of your order. C.O.D.'s are \$3.00 extra but will be shipped within 2 weeks. All prices are F.O.B. Mishawaka, Indiana. Indiana residents add 4% sales tax.

ALSO COMING FROM ESMARK:

- TRS-80 Printer Interface (Cassette AUX-jack interface for all RS232 prints. Includes LLIST & LPRINT software)
- TRS-80 RS232 Communications Interface (Makes your TRS-80 a full I/O terminal to time-sharing systems the world over. Gives you intelligent or dumb terminal capabilities at 110 or 300 BAUD. Also includes Printer Interface above with 20 mA current loop & TTL level I/O options.)

— TRS-80 is a trademark of Tandy Corporation —

Board Games-1, CS-3001 (16K)

• Mugwump \$7.95

Mugwump is a board game which uses a 10x10 grid on which four friendly Mugwumps are hiding. Your mission is to locate these mysterious animals and capture them.

• Flip Disc

Are you an Othello freak? Flip Disc is a program which will turn your computer into an excellent opponent. Three different skill levels, (good, expert, and genius), provide an introduction for the novice and continuing interest for the experienced player.

• Wumpus

In game 1, you scour a network of underground caves in search of the prized Wumpus. Bagging a Wumpus wins the game, but if you accidentally stumble into his cave, the Wumpus will enjoy a tasty dinner of sauteed computer freak.

• Wumpus 2

If you master the dodecahedron cave network in Wumpus 1, you may proceed to Wumpus 2 which allows you to choose from five different caves, or you can design your own.

• Qubic

Qubic is a three dimensional Tic Tac Toe game. The game is played in a 3 dimensional cube (4x4x4). The object is to outwit the computer and place four pieces in any straight line.

• Backgammon

This is the TRS-80 adaptation of the popular board game. Backgammon uses graphics and all the standard backgammon rules, not a strange computer variation. The computer is your opponent in this version, written by Scott Adams of "Adventure" fame.

WRITE FOR...
FREE
SOFTWARE CATALOG

Space Games-3, CS-3002 (16K)

• Ultra-Trek \$7.95

Ultra-Trek is a fast-paced version of Star Trek, complete with "real time" action graphics, lasers, Nilon space mines, high energy photon torpedoes, enemy ships that move, and an experimental ray which does something different each time you use it. You must act quickly to save yourself and the Federation.

• Star Lanes

Imagine yourself the president of an intergalactic shipping company. If you're successful, you may be named Imperial Advisor on Economic Affairs. Entrepreneurs: to your ships.

• Star Wars

If you hate Darth Vader, you'll love Star Wars. This real time game is fun for aliens of all ages. May the Force be with you!

• Romulan

Your mission is to destroy an invading Romulan space craft. Maneuver through space and around stars looking for the deadly enemy, but be careful! The nasty Romulans fire back.

Air Traffic Controller, CS-3006 (16K) \$7.95

This real time machine language program puts you in the chair of an air traffic controller. There are 27 airplanes — jets and prop planes — which must be controlled as they land, take off and fly over your air space. You give the orders to change altitude, turn, maintain a holding pattern, clear for approach, and land at your two airports. This realistic simulation includes navigational beacons, and requires planes to take off and land into the wind. Air Traffic Controller was written by an air traffic controller and is a favorite of the Creative Computing staff!

For the SERIOUS Game Player

Who Is Creative Computing?

Creative Computing consists of five divisions serving you. **Creative Computing magazine** is the number 1 magazine of software and applications. **Creative Computing Press** publishes a wide variety of books, art prints, posters and T-shirts for the computer enthusiast. And **Creative Computing Software** produces and markets software on cassette and floppy disk for a wide variety of computers for home, school, and small business.

If your dealer does not carry the full line of Creative Computing products, please send three first-class stamps for a free catalog of products.

Adventure

Welcome to an astonishing new experience! **ADVENTURE** is one of the most challenging and innovative games available for your TRS-80.

• Adventureland

You wander through an enchanted world trying to recover the 13 lost treasures and encounter WILD ANIMALS, MAGICAL BEINGS, and many other perils and puzzles.

CS-3008 TRS-80 16K Level II \$14.95

CS-3506 TRS-80 48K DISK \$24.95

(Includes Pirate Adventure)

• Pirate Adventure

Can you recover LONG JOHN SILVER's lost treasure.

CS-3007 TRS-80 16K Level II \$14.95

CS-3506 TRS-80 32K DISK \$24.95

(Includes Adventureland)

• Mission Impossible Adventure

Will you be able to complete your mission in time? Or is the world's first automated nuclear reactor doomed?

CS-3009 TRS-80 16K Level II \$14.95

CS-3507 TRS-80 32K DISK \$24.95

(Includes Voodoo Adventure)

• Voodoo Castle

Count Cristo has had a fiendish curse put on him by his enemies. Will you be able to rescue him or is he forever doomed?

CS-3010 TRS-80 Level II \$14.95

(Available in November)

CS-3507 TRS-80 32K DISK \$24.95

(Includes Mission Impossible)

• The Count

You'll love this Adventure; in fact, you might say it's LOVE AT FIRST BITE...

CS-3011 TRS-80 Level II \$14.95

(Available in November) READER SERVICE 13

Strategy Games, CS-3005 (16K)

• Tunnel Vision \$7.95

You are transported into a massive labyrinth and must find the exit or be lost forever. This is an excellent example of three dimensional perspective using TRS-80 graphics.

• Evasion

In this real time game, you are pursued around the game board by an evil-looking snake. Variations of play include two different speeds and hyper-jumps which randomly relocate you on the board. Looking for an escape? Try Evasion.

• Jigsaw

Jigsaw is a computer-age puzzle game making extensive use of TRS-80 graphics. The computer generates a random puzzle and puzzle board. Using a combination of deductive reasoning and luck you must fit the graphically represented puzzle piece into place.

• The Masters

Are you a wandering pro or just a Sunday golfer who would like to keep in practice? Once you're on the green, a worm's-eye view is displayed for putting.

• Motor Racing

Motor Racing combines real time racing action with advanced graphics functions. The graphics and animation make Motor Racing fun to watch as well as play.

Pursuit Games, CS-3004 (16K)

• Stock Car Race \$7.95

Stock Car Race is a real time racing game on a road race circuit.

• Maze

You are timed throughout your run and rated on the basis of elapsed time and the number of moves required to escape. Nine skill levels.

• Indy Racer

Indy Racer is a real time racing game for the TRS-80. Similar to the popular arcade-style driving games.

• Depth Charge

As commander of a destroyer, your mission is to destroy as many enemy subs as possible in this re-creation of the Battle of the Atlantic.

• Kaleidoscope

This graphics demonstration program turns your TRS-80 into a computer age kaleidoscope.

Creative Computing Magazine

Creative Computing has long been Number 1 in applications and software for micros, minis, and time-sharing systems for homes, schools and small businesses. Loads of applications every issue: text editing, graphics, communications, artificial intelligence, simulations, data base and file systems, music synthesis, analog control. Complete programs with sample runs. Programming techniques: sort algorithms, file structures, shuffling, etc. Coverage of electronic and video games and other related consumer electronics products, too.

Just getting started? Then turn to our technology tutorials, learning activities, short programs, and problem solving pages. No-nonsense book reviews, too. Even some fiction and foolishness.

Subscriptions: 1 year \$15, 3 years \$40. Foreign, add \$9/year surface postage, \$26/year air.

Basic Computer Games

Edited by David Ahl, this book contains 101 imaginative and challenging games for one, two, or more players — Basketball, Craps, Gomoko, Blackjack, Even Wins, Super Star Trek, Bombs Away, Horserace. Simulate lunar landings. Play the stock market. Write poetry. Draw pictures.

All programs are complete with listing in Microsoft Basic, sample run and description. Basic conversion table included. 125,000 copies in print. 192 pages softbound. [6C] \$7.50.

More Basic Computer Games

Contains 84 fascinating and entertaining games for solo and group play — evade a man-eating rabbit, crack a safe, tame a wild horse, become a millionaire, race your Ferrari, joust with a knight, trek across the desert on your camel, navigate in deep space.

All games come complete with program listing in Microsoft Basic, sample run and description. 192 pages softbound. [6C2] \$7.50.

The Best of Creative Computing

The first two years of **Creative Computing** magazine have been edited into two big blockbuster books. **American Vocational Journal** said of Volume 1, "This book is the 'Whole Earth Catalog' of computers." [6A] Volume 2 continues in the same tradition. "Non-technical in approach, its pages are filled with information, articles, games and activities. Fun layout." — **American Libraries**. [6B] Each volume \$8.95.

Computer Coin Games

Computer Coin Games by Joe Weisbecker aids newcomers to the field of computers by simplifying the concepts of computer circuitry through games which can be played with a few pennies and full sized playing boards in the book. Enhanced by outrageous cartoons, teachers, students and self-learners of all ages will enjoy this 96 page softbound book. [10R] \$3.95.

How To Order

Send order and payment to **Creative Computing**, P.O. Box 789-M, Morristown, NJ 07960. Add \$1.00 shipping and handling per order (foreign, \$2.50) N.J. residents add 5% sales tax. Visa, MasterCard and American Express orders welcome. For faster service, call in your bank card order toll free to: **800-631-8112**. (In NJ, call (201) 540-0445.)

THE LOWEST

prices on this high-quality software. Buy direct and save 50%. Now, also available for CBASIC on CP/M and MBASIC on HEATH HDOS.

DATA BASE MANAGER Mod-I \$69 Mod-II \$199
You can use it to maintain a data base & produce reports without any user programming. Define file parameters & report formats on-line. Key random access, fast multi-key sort, field arith., label, audit log. No time-consuming overlays. 500 happy users in a year. Mod-II version with over 50 enhancements.

A/R Mod-I \$69 Mod-II \$149
Invoices, statements, aging, sales analysis, credit checking, form input, order entry. As opposed to most other A/R, ours can be used by doctors, store managers, etc.

WORD PROCESSOR Mod-I \$49 Mod-II \$49
Center, justification, page numbering... Used for letters, manuals, and reports. Mod-I version features upper/lower case without hardware change!

MAILING LIST Mod-I \$59 Mod-II \$99
The best! Compare and be selective. Form input, 5-digit selection code, zip code ext., sort any field, multiple labels. Who else offers a report writer?

INVENTORY Mod-I \$99 Mod-II \$149
Fast, key random access. Reports include order info, performance summary, E.O.Q., and user-specified reports. Many converted their inventory to ours!

PAYROLL, A/R, A/P, and GL available for the Mod-II DOS and CP/M. L216, a cassette package of 10 business programs for Level II 16K systems, \$59.

All programs are on-line, interactive, random access, virtually bug free, documented and delivered on disks. Mod-I programs require 32K TRSDOS, and credit is allowed when you upgrade to Mod-II. We challenge all software vendors to offer low cost manuals so you can compare and avoid those high-priced, undocumented, "on-memory" programs. Manuals alone \$5 for Mod-I, \$10 for Mod-II. Don't let our low prices fool you!

Mod-II programs are extensively modified, guaranteed to run with 1 year newsletter and updates. 10% off for ordering more than 1 Mod-II program.

The BONE FONE is a miniaturized AM/FM stereo system that drapes over your shoulders like a scarf. The BONE FONE gives new meaning to the word portable. You don't carry a BONE FONE around with you. You wear it. Ski with it, cycle, jog or just take a leisurely stroll through the woods with it. It's the hands-free stereo that brings beautiful music to every indoor or outdoor activity without disturbing those around you and without covering your ears.

The BONE FONE stereo is covered with a sleeve made of Lycra Spandex - the same material used to make expensive

swim suits, so it's easily washable. You simply remove the sleeve, dip it in soapy water, rinse and let dry. The entire system is also protected against damage from moisture and sweat making it ideal for jogging or bicycling.

The BONE FONE has been selling nation-wide for \$70. HARD-SIDE's special price is ONLY \$56.95 plus \$2.50 handling (we pay the UPS charges).

9902..... \$56.95

HAVE WE GOT A PROGRAM FOR YOU!

The new computers are showing off. Over \$50 million worth of equipment in over 100,000 square feet of space, including the latest software and hardware for business, government, home and personal use. Everything the NCC show has and more will be on display, and you can buy it all right on the spot.

Computers costing \$150 to \$250,000, mini and micro computers, data- and word-processing equipment, telecommunications, office machines, peripheral equipment and services from leading names in the industry like IBM, Xerox, Radio Shack and Apple will all be there.

There'll be conferences on business uses of small to medium sized computers, and how to make purchasing evaluations.

There'll be robots, computerized video games, computer art and computer music.

Everyone from kids to people who earn their living with computers will have a great time at the largest computer show ever organized in each region.

Admission for adults is \$5. The public is invited, and no pre-registration is necessary.

Don't miss the computer show that mixes business with pleasure. Show up for the show.

**** BY JAMES TALLEY ****

NFL-PIX for 1980-1981 SEASON

Predict this Season's Games!

This program will maintain weekly team schedules, keep track of scores of games played, list current Division win-loss standings and --- predict the probable outcome of games! It establishes a rolling average of strengths of all teams based on past performance. During the last season its prediction was 6% better than the Greek Prognosticator!

For 16K Level II TRS-80 or Single Disk DOS ----- Just \$19.95
Please specify tape or disk!! Documentation supplied with either disk or tape.
