# INTRODUCTION

This tutorial is aimed at readers who are about to use Helios for the first time and have little or no experience of Unix-like systems. It provides a simple introduction to the most commonly used features of the Helios user interface.

The tutorial consists of a sequence of descriptions of commands with associated examples. The examples should be done in the order they are given. They are boxed to make them stand out from the descriptions. The bold text shows what you should type in and the lighter text shows what you should see on the screen. All actions in the tutorial are numbered consecutively.

**It is essential that you do all the examples in the correct order as they are interdependant.**

Each time a new command is introduced its name appears in the margin together with a one line summary in the main column. This should help you to reference them quickly.
